Marie Gale : Good Manufacturing Practices for Soap and Cosmetic Handcrafters before purchasing it in order to gage whether or not it would be worth my time, and all praised Good Manufacturing Practices for Soap and Cosmetic Handcrafters:

0 of 0 people found the following review helpful. and shows examples of what you should be doing for good manufacturing practices when making Soap CosmeticsBy JoshThis book tells you, and shows examples of what you should be doing for good manufacturing practices when making Soap Cosmetics. There are some other minor chapters

on Subcontracting, Returns policies and other topics, but the real value of this book is all in you learning the system of the first few chapters. If you are unsure whether you should buy this book, ask yourself: how much do you value improved quality in your products because you followed safety standards and good manufacturing practices. Does your family not care? Do you care if your home operation becomes more efficient? If you are selling your products then a book like this must be mandatory purchase. 0 of 0 people found the following review helpful. Great help for starting to implement GMP on small scale ...By CustomerGreat help for starting to implement GMP on small scale production. A lot of things might seem kinda obvious but for a small handcrafter is pretty sweet to have guidelines to adhere to, so instead of having to think about how should I organize everything I have to think mostly on the content of my documents, which is nice when time is such a precious resource. 0 of 0 people found the following review helpful. and provides all the information needed to practice Good Manufacturing PracticesBy Loreen BennettUsing this book while studying botanical body care products. Very informative, clear, concise, and provides all the information needed to practice Good Manufacturing Practices!

Most people who make handcrafted soaps and cosmetics do so because they want better, safer or more natural products and have a personal passion for what they are doing. They are conscientious in their selection of suppliers and raw materials, creative in their formulations, careful in their production and, in the end, proud of their finished products. They have control over every phase and aspect of the production cycle, from beginning to end, and are frequently hands-on during the entire process. Large companies, with many employees involved in manufacturing tens of hundreds of thousands of product units at a time don't have that same level of "hands-on" or personal passion. With increased levels of automation and numerous people in the process comes increased possibility for mix-ups or contamination of products - hence the need for detailed and exact procedures that can be double-checked and documented throughout the manufacturing cycle. Out of that need comes the concept of "good manufacturing practices." Establishing and then following good manufacturing practices in your business is like having and using a GPS navigator to get around town. No matter how familiar you are with the streets, it takes a lot less effort to just follow the directions. The trick, of course, is having all the necessary information in the navigator to start with. That's what GMP is all about - setting up the navigation system for your production and manufacturing, so you can avoid the potholes and steer clear of the factors that could potentially wreck your product.
