Bookman International B.V., Jacob Botermans : High-Flying Paper Airplanes before purchasing it in order to gage whether or not it would be worth my time, and all praised High-Flying Paper Airplanes:

0 of 0 people found the following review helpful. Not goodBy MindWar77Visual instructions are not clear.0 of 0 people found the following review helpful. Great paper plane book for your creative child!By Flora CarvalhoTook a little longer coming in but my son loved it! He can just look at the different paper planes and make it.He smiled all day the day it arrived!4 of 4 people found the following review helpful. The power of flight . . in your hands.By Newton OoiPaper airplanes are probably one of the few children's pastimes that has lasted thru the 20th century into the 21st century. But one thing surely has changed, the complexity of planes that can be built. As real-life aircraft become more and more innovative in design and appearance, paper aircraft have followed this lead. This book is a great example; 48 different models, many of them based on flying craft that are either real or featured in some movie or TV show. The models described in this book are quite exquisite, and range in difficulty from being easy to make to quite advanced. Some require scissors and other accessories along with the 8"x11" piece of white paper. But all are fun to make. The only drawback is the book tends to overestimate the flying ability of many of its creations. I've built all of the models several times, and some are not fliers in any sense of the word. But they are all nice to look at.

From the Concorde to the Stealth Bomber, these more than 35 great-looking, superbly aerodynamic paper craft look amazingly like the actual planes, helicopters, and gliders they're modeled on. And, along with this easy-to-follow and well-illustrated manual, all you need to construct them are paper, some basic origami folds, and a few everyday supplies such as a pencil, glue, scissors, and tape. True to its name, the Simple Jet is so uncomplicated to make, it's worth creating an entire fleet in different colors. The Arrow-head flies fast and true; decorate its huge wings with personal insignia. Try experimental planes, such as the Grumman A-6 Intruder; stunt flyers, including the Avro Vulcan, especially made for performance flights; and many other exciting craft.
